

X Scraper + Claude Project: Viral Post Workflow

A fast, repeatable system to turn top-performing X content + your own analytics into viral posts in your voice.

STEP 1 — Run the X Scraper

Goal: Pull fresh, high-signal posts from target accounts/keywords.

1. **Define the slice**
 - Sources: competitors, creators in niche, target accounts, "idea neighbors".
2. **Run the scrape** and export CSV → save as `n8n Twitter_X Data Sheet.csv`.
3. **Minimum columns** (ensure your CSV includes these headers):
 - `post_id, author, created_at, text, media_type, url`
 - `likes, retweets, replies, bookmarks, views, engagement_rate`

QC checklist:

- Remove giveaways, contests, follow trains.
 - Deduplicate identical posts.
 - Strip quote-tweets unless content body is self-contained.
-

STEP 2 — Curate & Download Viral Posts

Goal: Keep only pattern-rich winners to train Claude's pattern finder.

1. **Sort** by your north-star KPI (e.g., Bookmarks or ER).
 2. **Keep top N** (e.g., 200–500 rows). Delete low-signal rows.
 3. Save CSV **again** as `n8n Twitter_X Data Sheet.csv` in today's folder.
-

STEP 3 — Export Your 90-Day X Analytics

Goal: Give Claude context on what already resonates in **your** account.

1. X **Premium** → **Analytics** → **Content**
2. **Export** last 90 days.
3. Open in a spreadsheet and **trim to essentials**; save CSV as `Account Analytics Content.csv` with columns:
 - `date, post_id, text, impressions, engagements, profile_visits, follows, likes, replies, retweets, bookmarks, link_clicks, engagement_rate`

QC checklist:

- Remove posts that were **pure announcements** or **non-evergreen** if they skew patterns.
- Ensure all numeric fields are numbers (no commas/percent symbols).

STEP 4 — Set Up a New Claude Project

Goal: Load both corpora + your house rules so Claude writes in-voice, on-trend.

1. **Create Project** → name it `X Viral System`
2. **Add Knowledge** → upload:
 - `Complete X Algorithm Domination Guide.pdf`
 - `n8n Twitter_X Data Sheet.csv`
 - `Account Analytics Content.csv`
3. **Project Instructions (System Prompt)** — paste the template

STEP 5 — Generate Content

Goal: Produce 10–20 publish-ready posts, ranked by expected performance, with hooks.
